

GRABYSUR showcases its Latest Products, Services and Technologies as an HMI Partner at Le Bourget

- The Andalusian company, with an international presence, is participating alongside Andalucía TRADE to showcase its latest developments in illuminated cockpit panels and night vision avionics equipment for the aerospace and defense sector at the Paris Air Show 2025.
- With over 30 years of experience, the company returns to the fair with the aim of strengthening ties with collaborators and partners, exploring new business opportunities, and expanding its commercial network into additional markets.
- Thanks to its specialized expertise, Grabysur has become a Tier One supplier for Airbus Defence & Space, establishing itself as a company capable of managing the entire product lifecycle—from design to repair—across not only the aerospace sector, but also in the naval and land-based domains.

-17 de junio 2025- The **Spanish company Grabysur**, a European leader in the manufacture of flight instruments and night vision equipment for aircraft and helicopter cockpits, is participating this week in the **International Paris Air Show 2025** at Le Bourget—the largest aerospace trade show in Europe—to unveil its latest innovations in illuminated cockpit panels and night vision avionics equipment for the aerospace and defense sector.

Located in the Spanish Pavilion (TEDAE, Hall 2A, stand D284), Grabysur is attending the show in collaboration with Andalucía TRADE, the regional public agency of the Andalusian Government, to showcase its integrated control panels, knobs, flight simulator components, and embedded equipment parts (such as ICPs, DKSUs, bezels, and control units) to leading companies, contractors, and global industry stakeholders. Under the motto "Your HMI Partner," Grabysur will present its capabilities in managing the entire product lifecycle—from design and manufacturing to assembly and repair.*

The company's participation also aims to strengthen relationships with European aerospace clusters and deepen connections with current clients and partners attending the event. As a European leader in the development of NVIS (night vision imaging system) compliant flight instrumentation for aircraft, Grabysur stands out as one of the few manufacturers on the continent with the expertise required to produce this specialized technology.

Grabysur is a regular participant in major aerospace and defense industry trade shows such as Aeromart Toulouse, ADM Sevilla, and, most recently, FEINDEF. The company seeks to "strengthen its collaboration with the main European clusters" and expand into new international markets including the United States, Canada, and Latin America. "Le Bourget offers an opportunity to continue growing in new market niches," stated company president Fernando Besa.

As a consolidated Tier One supplier for Airbus Defence & Space (Airbus Group), Grabysur is involved in key military aircraft programs such as the A330MRTT, C295, CN235, C212, and the A400M (assembled in Seville). The company has also expanded into the naval and ground sectors, working with major players such as Indra and Navantia.

Grabysur develops advanced low-power, low-temperature, and highly reliable LED backlighting technology, as well as panels with incandescent lamps and electroluminescent sheets. Very few companies in Europe possess the technology and expertise needed to produce cockpit panels for aircraft, naval vessels, and military ground systems.

Sustained Growth in the Defense Sector

More than 90% of Grabysur's revenue comes from the defense sector, and the company has doubled its turnover in the past five years. Of these sales, 34% are made directly to Airbus, while 14% go to its major subcontractors. Grabysur's client portfolio, in addition to Airbus Defence & Space, includes prominent names such as Thales, Pavelsis, OGMA, and various national and international Air Forces.

The company's technological know-how, combined with growing workload forecasts and new business lines, supports its strong growth outlook. In 2024, Grabysur reached a turnover of €3.6 million—a 30% increase compared to 2023—and has achieved an overall sales growth of 228% since 2018. The company expects to reach €5 million in turnover within the next five years.

Furthermore, its workforce has grown by 45% over the past six years, currently employing 35 professionals, with a particular focus on highly qualified profiles. Engineers now make up 30% of the company's staff.
